INTERLAKEN

Seedless Grape

This seedless and almost skinless California type table Grape is as hardy as an Oak. Yellow in color when fully ripe. Juicy and sweet. Gets ripe in August ahead of most other varieties. Vines are vigorous, with large, light green leaves to shade those long bunches hidden along the vine. No matter how many Grapes you now have planted, one or more Interlaken should be a "MUST". Our supply of plants is a little larger so we have lowered the price quite a bit.

Minnesota 1166 is a large, long-pointed berry, produced on long-branched fruit stems, well hidden under the leaves for good protection. The color of the fruit is on the dark red order, and a solid red clear through the berry, even when the berry is still not quite ripe. Excellent for freezing.

Minnesota 1166 is just as productive as any everbearing Strawberry we have grown, and makes a good quantity of plants. For best results in fruit production, we recommend that the runners be pinched off as fast as they appear in the summer. It's a strong grower. With the small amount of juice this variety contains, will make it the very best jam berry ever introduced.

We like 20TH CENTURY Everbearing Strawberries best of all, because it grows and bears so abundantly in any type of soil, and does well in most all localities. The fruit is fully as good quality as the Gem. Brilliant red in color all the way through the berry. Firm texture, which makes it ideal for canning or freezing. One of the sweetest of all Strawberries so that less sugar is required. Plants grow strong, with dark green leaves and make just the right width fruiting row. You can start picking berries within 60 days after you set the plants in the spring, and continue right up to heavy frosts in late fall. The following June you get another full crop, and then again all summer and fall.

HIGHEST QUALITY. These big round blunt-pointed berries are of top quality. They are borne on large thick fruit stems, that are protected with heavy foliage that makes up a wide fruiting and picking row.

The tangy, rich, sweet flavor is found in no other Strawberry. ROBINSON is the largest berry we have to offer. It's late—starting to ripen about the time Premier is finishing up. By planting Premier for early and Robinson for late, you will have fresh fruit from start to finish, over a 30-day period. Berries have a firm skin, and are solid all the way through, making it a good shipper as well as a good home use variety. You will like Robinson.

June Bearing Variety—Over 50 Years Old But Still Good

Senator Dunlap is an old well known variety that has made more dollars for berry growers than any other variety. It will grow most anywhere and on any kind of soil. However, it will do best on heavy, rich soil. If planted on light soil, be sure to set them 2 feet apart. On heavy soils set them 18 inches apart. Berries are dark red, firm and sweet. GEM GIANT EVERBEARER

BEARS 60 DAYS AFTER PLANTING

Gem is one of the older varieties of Everbearing Strawberries, and the Gem that we offer have been improved a lot, by plant selecting, so that now our plants produce an enormous amount of fruit 60 days after they are set, right up to a killing frost in the late fall. **FRUIT IS LARGE AND BRIGHT RED.** Red clear through, and when grown in the hill system (keep runners pinched off) they will produce much more and better fruit. Set plants 1 foot apart in the row in the **HILL SYSTEM**, and each plant will touch each other by fall, and have a dozen fruit stems on at one time. Gem is a fine commercial berry as well as for home use. Excellent for freezing as it stays whole after thawed. Grows well on heavy soils as well as light. **PLANT GEM FOR A BORDER.** Use Gem as a border plant in front of Roses or other flower beds.

Catskill

This variety was introduced several years ago by the New York Experimental Station. Catskill and Robinson are two of the finest late Strawberries. They follow Premier and Dunlap. Berries are extra large and smooth. The last ones that you pick from the thick, stiff fruit stems that stand upright with a full load, will be nearly as large as the first ones, and just as smooth. We do not have a more beautiful berry to offer. Mild and nearly non-acid. Folks who are bothered with Strawberry rash tell us they can eat Catskill. Catskill will do fine on any type soil, but does the very best on a heavy clay loam, and fine on a stiff clay soil.

A Five-Year-Old Bush

Cultivated Blueberries

Grow Them in Your Garden—
Grow Them Commercially

For a big money-making crop, these giant size, dark blue Blueberries are without equal. No other fruit bears more abundantly and requires so little care. Even a few bushes will provide the average family with enough fruit all season for fresh desserts and pies, and for canning and freezing. Berries shown here are Jersey variety. They have a mild sweet flavor, and are consistently uniform in size and shape.

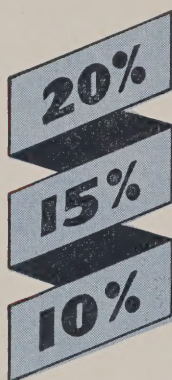

EASY TO GROW. We find that they are not near as fussy about what kind of soil they will grow on, as we thought a few years ago. They prefer a rather moist, acid soil, but we also find that they will grow on other soil, too, by adding some peat moss, old leaves or sawdust with the soil. Water them well during dry spells.

The cultivated Blueberry is a rather DWARF growing plant. A plant 15 years old will not be over 6 feet tall, but it will be the same size in circumference. Their roots are all very near the top of the soil, so they must be cultivated very shallow. Set the plants 5 feet apart each way, and keep clean by frequent cultivation.

Thornless Boysenberry

This is the early ripening strain of Thornless Boysenberry with canes as smooth as a Grape vine. This new strain Thornless Boysenberry is identical to the Boysenberry except that there are no thorns and it ripens earlier. The Thornless is just as hardy, rugged and heavy bearing as its parent, the Boysenberry. Vines grow 25 feet long, and this pretty apple-green vine loaded with giant purple beauties is a sight you will never forget, and after you taste a handful of them, other berries will go begging for a while. Delicious with cream and sugar, and when made into jam, it's the last word.

LATHAM The Commercial Growers FIRST CHOICE

Latham grows anywhere on most any type of soil, and so hardy that it will stand 45 degrees below zero. Latham berries are large, often an inch in diameter. Best all-around berry to grow. Cans well, and fine for freezing. Holds the load of fruit well. Latham has that old-fashioned real Red Raspberry flavor lacking in so many other varieties. Set Latham plants 3½ ft. by 7 ft. apart. March, April and May are the best planting months. Plant soon as ground can be worked. 25 plants will plant a row 85 feet long, and plenty for average family.

SEPTEMBER EVERBEARING RED RASPBERRY TWO BIG CROPS A YEAR

The first crop begins to ripen with Latham. The fall crop starts to ripen in early September. In both crops the berries are about as large as Latham, and of about the same quality. The plants are vigorous, healthy, and hardy. This NEW variety has been carefully tested, and has proved to be the best of the two-crop-a-year red Raspberries.

WHITE BLACKBERRY

Strange as it may seem, this is a real creamy white Blackberry. Mixed with the jet-black ones for dessert, it makes a most wonderful dish. The fruit is about the size of Alfred, with few seeds and quite sweet when fully ripe. The bushes are good, strong growers and very productive.

One of the largest selling Roses ever introduced. Grows in true pillar form. Terrific crop of early blooms followed by repeat blooms throughout the summer and fall season. Plants have the hardiness and good habits of the Paul's Scarlet parentage. Good bright green foliage and sturdy canes. Excellent for use on each side of a driveway entrance or along a background fence. Color is intermediate scarlet and does not readily fade after blooms open. The patent rights on Blaze ran out so we can now sell it at regular prices. **LESS DISCOUNTS. PRICES BELOW.**
